Smoke Alarms Save Lives: Placement & Maintenance Guide

Placement & Selection Standards

Cuts Fire Fatality Risk By Over 50%

Early detection is critical because fatal fires spread rapidly, especially at night.

Install On Every Level and In Bedrooms

Place alarms inside sleeping rooms, outside sleeping areas, and 10 feet from kitchens.

Choose Interconnected Dual-Sensor Alarms

Interconnected units sound simultaneously across the entire building when fire is detected.

Maintenance & Emergency Action

Test Monthly and Replace Every 10 Years

Change batteries annually and vacuum dust regularly to prevent false alarms.

Get Out Immediately When Alarms Sound

Close doors behind you, stay outside, and call 911 from a safe location.
